ELECTION RESTRICTION REQUEST

Status of The Claims

Currently, claims 1-8 are active in the instant claims and are hereby subjected to restriction as follows.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims **1-5 in part** drawn to **heterocyclic derivatives** as described in the said claims, and further methods of using the said compounds as described in **claims 6-8 in part**, classified in multiple classes and multiple subclasses. **This group may be subjected to further restriction. A *single disclosed species is hereby requested for search purpose.***

- II. Claims **1-5 in part**, drawn to **NON heterocyclic derivatives** and method of using the said compounds as described in claims **6-8 in part** classified in multiple classes and multiple subclasses. **This group may be subjected to further restriction. A *single disclosed species is hereby requested for search purpose.***

The inventions are distinct, each from the other because of the following reasons:

Inventions II-I are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case Inventions II-I are not related inventions because each set of compounds

Art Unit: 1625

embraced by each particular Group I-II do not possess the same substantial core, nor is the common existing core novel or seen to be essential to the utility by itself in such a way that the resultant compounds upon substitution of the variables are so structurally diverse that a reference anticipating one group would not necessarily render the other obvious and to search all the different structurally diverse compounds in a single application would present a serious undue burden to the Examiner. Moreover, each compound are not disclosed as capable of using together, they are used separately in order to prepare diastereoisomers that are further required to be separated in order to achieved an enantiomeric resolution. Thus, two or more of the said compounds cannot be used simultaneously.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for a given Group is not required for any other Group, restriction for examination purposes as indicated is proper.

Art Unit: 1625

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
